

ABSTRACT

Please insert the following abstract.

--This invention relates to multimedia page editing on a terminal. A server (SER) supplies pages to the terminal (TER) in the form of object arrangement commands for objects in a multimedia page to be generated. The method according to the invention comprises a preliminary step wherein the server transmits an object-related data packet as well as a temporary store (CACHE) for the data (DATA), which is identified by a link (node i) in a terminal memory; and a main step wherein the server transmits a descriptive file containing said link for editing the object in a scene being generated in the terminal on the basis of the stored data.--
